# What's The Problem?

- ❖ Gentrification is the process of changing the character of/renovating a neighborhood to fit the taste of the middle class.
- ❖ 12% of neighborhoods in New York are currently being gentrified or have already been gentrified
- ❖ Loss of historical places
- ❖ Lower-Income families get pushed out

# Goals Vs What We Completed

## Goals:

Make a bot for Instagram that can post pictures of neighborhoods before and after gentrification

## What We Made:

A bot that can successfully open a browser and log into Instagram and open DM's!

## For The Future:

- Add the ability to respond to DM's and post the before and after photos.
- Set up the program to run automatically with CloudyCluster

```
# find where to input credentials
username_input = browser.find_element(By.CSS_SELECTOR, "input[name='username']")
password_input = browser.find_element(By.CSS_SELECTOR, "input[name='password']")
```

```
def move_to_text_input(message):
    position = pt.locateOnScreen('images//image_icon.png', confidence=.7)
    pt.moveTo(position[0:2], duration=.5)
    pt.moveRel(-100, 20, duration=.5)
    pt.doubleClick(interval=.3)
```

```

```

# Our Process + The Demo!!

[Demo Link](#)

[Github](#)

1. Used Selenium to open a Chrome browser
2. Searched for Instagram Bot Libraries. (all out of date)
3. Switched to Facebook/ Instagram Graph API and got necessary tokens.
4. Coded the automated Instagram post using Python.
5. Coded the bot to read and respond to DM's

# Resources

- CloudyCluster
- pyCharm/Python 3
- RepLit
- Instagram Graph API
- Postman
- Youtube

# A Special Thank You!

To our mentors:

- ❖ Charlie Dey
- ❖ Dr. Felicia Doswell
- ❖ Dr. Thorns Humphries

Hosts:

- ❖ Je'aime Powell
- ❖ Dr. Linda Hayden
- ❖ Boyd Wilson
- ❖ Amy Cannon
